

# FRESNO COUNTY INCENTIVE PROJECT

## Eligible Equipment List

The Fresno County Incentive Project (FCIP) is a project funded by the California Energy Commission and implemented by the Center for Sustainable Energy (CSE) to promote access to electric vehicle (EV) charging infrastructure. Rebates of up to \$4,000 for single port EV chargers and up to \$7,000 for dual port EV chargers are available for the installation of Level 2 EV chargers at eligible sites in Fresno County.

**Disclaimer:** The Center for Sustainable Energy and the California Energy Commission are not endorsing the EV charger companies or chargers in this document. The EV chargers listed below meet the minimum eligibility requirements for CALeVIP and have been submitted by their manufacturer for eligibility listing. Charger stock availability is based on each respective company and is not guaranteed by CALeVIP.

To be eligible for FCIP, the EV charger(s) must meet the following requirements

- Be new equipment installing for the first time, installing on a wall or pedestal mounting at the corresponding site address. Resale units, rebuilt, rented, received from warranty insurance claims, won as a prize or new parts installed in existing units do not qualify.
- Utilize the SAE J1772 charging connector.
- Be networked, which is defined as a charger connected to a back-end network operations center.
- Be capable of delivering electricity to a plug-in electric vehicle at a minimum rate of 6.2 kilowatts (kW).
- Have 1-10 connectors per site. A maximum of 10 connectors per site location can be rebated.
- Use an open standard protocol as a basic framework for purposes of network interoperability.
- Be ENERGY STAR® certified.
- Be approved by a Nationally Recognized Testing Laboratory (NRTL) program for EVSE testing and certification.

All equipment descriptions are provided by the manufacturers.

For more information, visit [CALeVIP.org](http://CALeVIP.org)

**IQ 200**

Super fast, networked Level 2 charging station. Capable of being installed on 40 amps to 100 amps, with 80 percent output at the plug.

**POWER OUTPUT:** 7.7 kW up to 19.2 kW
