DISCLAIMER

The Center for Sustainable Energy and the California Energy Commission are not endorsing the EV charger companies or chargers in this document. The EV chargers listed below meet the minimum eligibility requirements for CALeVIP and have been submitted by their manufacturer for eligibility listing. Charger stock availability is based on each respective company and is not guaranteed by CALeVIP.

The EV charger(s) must meet these requirements.

LEVEL 2 CHARGERS

- Be new equipment installing for the first time, installing on a wall or pedestal mounting at the corresponding site address. Resale units, rebuilt, rented, received from warranty insurance claims, won as a prize or new parts installed in existing units do not qualify.
- Utilize the SAE J1772 charging connector.
- Be networked, which is defined as a charger connected to a back-end network operations center.
- Be capable of delivering electricity to a plug-in electric vehicle at a minimum rate of 6.2 kilowatts (kW).

Have 1-10 connectors per site. A maximum of 10 connectors per site location can be rebated.

Use an open standard protocol as a basic framework for purposes of network interoperability.

Be ENERGY STAR® certified.

Be approved by a Nationally Recognized Testing Laboratory (NRTL) program for EVSE testing and certification.

DC FAST CHARGERS

- New EV charging equipment.
- Include DCFC dual standard chargers with both CHAdeMO and SAE CCS connector options.
- Networked: Equipment and network must have remote diagnostics and be capable of “remote start.” Must also be capable of usage data collection. Minimum five-year networking agreement (eligible towards total project cost).

Capable of 50 kW or greater.

If payment is required, must accept some form of credit cards and multiple forms of payment.

Be approved by a NRTL program for EVSE testing and certification.

Rebates for Level 2 EV chargers and DC fast chargers vary by project. For details on rebate amounts, visit CALeVIP.org/find-project and select a specific incentive project.
Autel MaxiCharger AC Commercial is a 50A smart EV charger, it can be connected to Autel Cloud Portal through 4G, Wifi or Ethernet to allow site hosts to easily manage and control the chargers, and its remote diagnostic function can help solve most of the issues through the cloud portal to reduce O&M cost; with its Dynamic Load Balancing function the site host can also manage the total energy consumption; it also supports OCPP and can be connected to and managed by other OCPP platforms.

Xeal is the only electric vehicle charger company that takes a holistic approach by integrating smart chargers with the building with our cloud-based software. Using a predictive data approach, enables Xeal to optimize the chargers’ power output with the demand of vehicle battery needs for 2-3x faster charging speeds and up to 70% reduced energy costs for the building. Additionally, Xeal’s proprietary internet-free solution enables its chargers to operate their own network independent to a 3rd party network provider like AT&T. Simply put, there is no other charger that provides 100% uptime while simultaneously reducing building energy costs, helping you realize your EV charging goals with a first-in-class customer experience.

The VersiCharge Ultra 175 kW DC charger is a powerful EV Charger engineered for reliability across a wide range of grid voltages. Charging your vehicle with the VersiCharge Ultra 175 kW DC charger is safe, secure, and simple, with industry standard plugs and a simple interface. Designed for multiple applications, the VersiCharge Ultra 175 is easy to install, operate, and maintain, making it a cost-effective solution for DC fast charging. Its patented liquid cooling technology provides durability in various environmental conditions.

Signet DP350K-CC

This high-powered charging system is able to charge both today’s and the next generation of EVs with a wide voltage range of 150 - 920 VDC. It can charge vehicles at up to 200A for CHAdeMO and 500A for CCS with liquid cooling. Various plug configurations are available; single or dual ports, and a combination of CCS and/or CHAdeMO.

Tellus Power 120kW Charger

Tellus 120kW Charger adopts innovative design with modular construction. The charger can be configured onsite to deliver either 1 x 120kW or 2 x 60kW (simultaneous charging). It provides wider voltage range from 150VDC - 750VDC providing compatibility to present and future generation EVs. It comes with a Credit Card reader, RFID reader, touch screen interface and is compatible with OCPP standard.
