All equipment descriptions are provided by the manufacturers.

DISCLAIMER

The Center for Sustainable Energy and the California Energy Commission are not endorsing the EV charger companies or chargers in this document. The EV chargers listed below meet the minimum eligibility requirements for CALeVIP and have been submitted by their manufacturer for eligibility listing. Charger stock availability is based on each respective company and is not guaranteed by CALeVIP.

The EV charger(s) must meet these requirements.

LEVEL 2 CHARGERS

- Be new equipment installing for the first time, installing on a wall or pedestal mounting at the corresponding site address. Resale units, rebuilt, rented, received from warranty insurance claims, won as a prize or new parts installed in existing units do not qualify.
- Utilize the SAE J1772 charging connector.
- Be networked, which is defined as a charger connected to a back-end network operations center.
- Be capable of delivering electricity to a plug-in electric vehicle at a minimum rate of 6.2 kilowatts (kW).
- Have 1-10 connectors per site. A maximum of 10 connectors per site location can be rebated.
- Use an open standard protocol as a basic framework for purposes of network interoperability.
- Be ENERGY STAR® certified.
- Be approved by a Nationally Recognized Testing Laboratory (NRTL) program for EVSE testing and certification.

DC FAST CHARGERS

- New EV charging equipment.
- Include DCFC dual standard chargers with both CHAdeMO and SAE CCS connector options.
- Networked: Equipment and network must have remote diagnostics and be capable of “remote start.” Must also be capable of usage data collection. Minimum five-year networking agreement (eligible towards total project cost).
- Capable of 50 kW or greater.
- If payment is required, must accept some form of credit cards and multiple forms of payment.
- Be approved by a NRTL program for EVSE testing and certification.

Rebates for Level 2 EV chargers and DC fast chargers vary by project. For details on rebate amounts, visit CALeVIP.org/find-project and select a specific incentive project.
LEVEL 2 CHARGERS
EV ARC™ 2020 with ChargePoint™ CT 4000 Series

Sustainable EV charging system that generates, stores and delivers its own electricity to ChargePoint Model CT 4000 Series chargers that are pre-installed at the Beam factory in San Diego. Off-grid, the Beam solution can charge EVs day or night, and during inclement weather and power outages. Deployed in minutes, each EV ARC™ fits in the size of a standard parking space—no electrical work, no construction, no utility bill.

- **POWER OUTPUT:** 6.2 kW
- **NUMBER OF CONNECTORS:** 1 or 2
- **CONTACT:** BeamTeam@BeamForAll.com (858) 799-4583

Xeal is the only electric vehicle charger company that takes a holistic approach by integrating smart chargers with the building with our cloud-based software. Using a predictive data approach, enables Xeal to optimize the chargers’ power output with the demand of vehicle battery needs for 2-3x faster charging speeds and up to 70% reduced energy costs for the building. Additionally, Xeal's proprietary internet-free solution enables its chargers to operate their own network independent to a 3rd party network provider like AT&T. Simply put, there is no other charger that provides 100% uptime while simultaneously reducing building energy costs, helping you realize your EV charging goals with a first-in-class customer experience.
