

Simple EV Charging Demand Survey

Simple EV Charging Demand Survey

Survey Question	Resulting Information	Explanation
Do you own an electric vehicle or are considering purchasing/leasing one in the next two years?	Number of EV drivers that will likely be on the property within two years.	This helps determine the short- and medium-term demand for EV charging, which will help you plan.
How long is your vehicle typically parked at <insert location where EV charging is being considered>?	Minimum number of hours available for EV charging.	This will be useful in selecting the type of EV charging, design of the charging system and setting employee/resident/guest charging policies.
How far is your typical daily round-trip commute? How far is your EV's electric range (or the EV you plan on purchasing/leasing)?	The total daily electric drive distance.	This will help determine how many miles of electric drive need to be delivered daily for each driver, which can in turn inform the total capacity needed to support daily EV driving.
